

Corporate Headquarters	901 Fifth Avenue, Suite 1000 Seattle, WA 98164	Phone: 206-701-2000 Fax: 206-701-2500																		
Website	<a href="http://www.cray.com">www.cray.com</a>																			
Stock Symbol	Nasdaq: CRAY																			
History	Cray was incorporated in December 1987 under the name Tera Computer Company and changed its name to Cray Inc. in connection with its acquisition of the Cray Research assets in April 2000. Cray Research was founded in 1972 by Seymour Cray.																			
Employees	More than 1,000 employees worldwide, with engineering facilities in Minnesota, Washington, Wisconsin, Texas, and California and manufacturing facilities in Wisconsin and California.																			
Business	Global supercomputing leader Cray helps scientific and engineering organizations of all types solve their most complex computing and analytics challenges. Leveraging over 40 years of experience developing the world's most advanced supercomputers, Cray offers a comprehensive portfolio of computing, high-performance data analysis ("Big Data"), and storage solutions for a range of budgets and needs.																			
Markets	Research, intelligence, defense, weather forecasting, climate research, academia, automotive, aerospace, finance, life sciences, energy, chemical, and pharmaceutical sectors

Arvind Parthasarathi	President, YarcData™ LLC																			
Financials	2012 revenue totaled \$421 million. Cash and investments as of December 31, 2012 totaled \$323 million.																			
Current Products	<p><b>Computing</b></p> <p><b>Cray XC30™ Supercomputer Series</b></p> <p>The Cray XC30 supercomputer provides extreme application scalability, leading sustained performance, and an adaptive platform that enables users to upgrade their system easily. Equipped with multiple processor technologies, a high-performance network, distributed operating system, and a productive programming environment, the XC30 series excels at large-scale computations and reduces processing times on the most challenging multi-petaflops applications. The Cray XC30-AC (air-cooled) supercomputer delivers all the advanced HPC technologies of the high-end XC-30 system while economizing the packaging, networking, cooling, and power for an optimal balance of features.</p> <p><b>Cray CS300™ Cluster Supercomputer Series</b></p> <p>Cray CS300 cluster supercomputers are highly scalable cluster solutions that group optimized, industry-standard building block server platforms into a unified, integrated system. Available with air- or liquid-cooled architectures, the Cray CS300 systems offer outstanding flexibility, manageability, and energy efficiency. The systems are integrated with Cray's HPC software stack and also feature Advanced Cluster Engine™ (ACE), a management software suite designed to provide network, server, cluster, and storage management features necessary to run large, complex technical applications.</p>																			

**Current  
Products &  
Services  
(continued)**

**High-performance Data Analysis**

**Cray Cluster Supercomputers for Hadoop**

Cray cluster supercomputers for Hadoop pair Cray CS300 systems with the Intel® Distribution for Apache Hadoop® (Intel® Distribution) software. Built on optimized configurations of the Cray CS300 systems, Cray cluster supercomputers for Hadoop software include a Linux® operating system, workload management software, ACE management software, and the Intel Distribution, which includes greater security, improved performance and real-time handling of data.

**YarcData Urika™ Graph Analytics Database**

YarcData, a Cray company, delivers Urika — a Big Data appliance for real-time data discovery, enabling enterprises to gain game-changing business insights. Purpose-built for real-time data discovery using graph analytics, Urika helps automate the surfacing of unknown relationships and non-obvious patterns in diverse data sets without the need for pre-modeling, partitioning or knowing all the questions in advance. Datacenter-ready and standards-based, Urika includes graph-optimized hardware; massively-multithreaded graph processors; highly scalable I/O; and an RDF/SPARQL database optimized for the underlying hardware.

**Storage**

**Cray Tiered Adaptive Storage (TAS)**

Cray Tiered Adaptive Storage provides a complete and open archiving solution for Big Data and HPC. Powered by Varsity's open storage virtualization technology, data migration policies enable transparent data movement across up to four storage tiers of SSD, disk, and/or tape.

**Cray Sonexion® Scale-out Lustre Storage System**

The Cray Sonexion scale-out Lustre storage system delivers precision performance at scale to any HPC cluster and application. Through an embedded, tightly integrated architecture, Sonexion scales performance and capacity in modular building blocks, reducing the cost and complexity of achieving sustained performance. Its compact form factor reduces the total infrastructure required for petascale deployment by 50 percent on average.

**Cray Cluster Connect (C3)**

Cray Cluster Connect is a complete, end-to-end Lustre storage solution for x86 Linux clusters. Customers utilize their Linux compute environment of choice through the Lustre Client by Cray and leverage Cray's expertise in scalable storage solutions for Big Data and high performance computing (HPC). The solution supports popular Linux distributions and provides a comprehensive Lustre storage solution architecture, fully qualified and supported by Cray.

**Data Management Platform**

Cray offers a suite of data management and storage connectivity products and services enabling data movement and management of third-party storage platforms. Cray's data management platform provides flexibility and choice which can be tailored to customer-specific requirements.

**Supported  
Products  
Corporate  
Vision**

**Cray XE6 Supercomputer Series; Cray XK7 Supercomputer Series**

"Adaptive Supercomputing" is Cray's long-term vision and sets the standard in hybrid high performance computing. It combines multiple processing technologies into a single system and conceals this complexity through innovative software technologies. The goal is to adapt the software and system to each application, rather than requiring the user to adapt the application.
